This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (original): A non-aqueous electrolyte secondary battery comprising:

a negative electrode with a composite layer containing a negative active material;

a positive electrode; and

a non-aqueous electrolyte;

characterized in that

said negative active material is an alloy containing 5 to 25 mass% of nickel and 75 to 95 mass% of tin, and

said alloy contains Sn₄Ni₃ phase and Sn phase.

- 2. (currently amended): The non-aqueous electrolyte secondary battery according to claim 1, characterized in that the content ratio of <u>said Sn4Ni3</u> phase and <u>said Sn phase</u> in said alloy is $0.2 \le Z \le 3$ when m_1 is the mass of <u>said Sn4Ni3</u> phase, m_2 is the mass of said Sn phase, and $Z = m_1 / m_2$.
- 3. (original): The non-aqueous electrolyte secondary battery according to claim 1 or claim 2, characterized in that said composite layer contains carbon material.
- 4. (original): The non-aqueous electrolyte secondary battery according to claim 1 or claim 2, characterized in that

said composite layer contains carbon material, and

when n_1 is the mass of said alloy, n_2 is the mass of said carbon material, and $S = n_1 / n_2$. S falls within the range of $0.05 \le S \le 3.5$.

Preliminary Amendment Based on PCT/JP 2003/008508

5. (original): The non-aqueous electrolyte secondary battery according to claim 1 or claim 2, characterized in that

in said composite layer, powdered negative active material is used, and the porosity of said composite layer is 30 to 75 %.

6. (original): The non-aqueous electrolyte secondary battery according to claim 3, characterized in that

in said composite layer, powdered negative active material is used, and the porosity of said composite layer is 30 to 75 %.

7. (original): The non-aqueous electrolyte secondary battery according to claim 4, characterized in that

in said composite layer, powdered negative active material is used, and the porosity of said composite layer is 30 to 75 %.

8. (original): The non-aqueous electrolyte secondary battery according to claim 1 or claim 2, characterized in that

the apparent density of said negative electrode is 2.5 to 8.3 g/cm³.

9. (original): The non-aqueous electrolyte secondary battery according to claim 3, characterized in that

the apparent density of said negative electrode is 2.5 to 8.3 g/cm³.

10. (original): The non-aqueous electrolyte secondary battery according to claim 4, characterized in that

the apparent density of said negative electrode is 2.5 to 8.3 g/cm³.
